Reviewer Acknowledgements and Highlights: Equity, Resilience, and the Human Dimensions of Health

GHMJ (Global Health Management Journal), Volume 9, Number 2, 2026

Reviewer Acknowledgement

The [Editorial Board](#) gratefully acknowledges the reviewers who contributed their time, expertise, and careful judgment to the manuscripts published in the issue of the [Global Health Management Journal \(Vol. 9, No. 2, 2026\)](#). Many of the contributions in this issue share a common concern with the conditions that shape health opportunities and outcomes. [Kpum and Gasu \(2026\)](#) challenge educational systems to recognize the financial and safety realities faced by women learners, while [Mboma et al. \(2026\)](#) draw attention to the vulnerabilities experienced by street-connected children in Kinshasa. Beyond individual experiences, [Ali and Makoni \(2026\)](#) demonstrate how climate variability can intensify financial hardship and worsen health outcomes among households affected by non-communicable diseases, reinforcing the need for policies that respond to both social and environmental challenges. Looking ahead, [Peter and Gasu \(2026\)](#) highlight the potential of entrepreneurship, innovative education, and cross-sector collaboration in building more sustainable and resilient health systems.

The recently completed publications from [Faculty of Medicine, Universitas Swadaya Gunung Jati](#), processed under [Special Edition commitment](#), represent new insights from biomedical and educational research. Genetic studies by [Rizqulloh et al. \(2026\)](#) and [Soeroso et al. \(2026\)](#) explore biological factors associated with diabetes and malaria, offering insights that may guide future research and disease prevention efforts. Within medical education, [Maharani et al. \(2026\)](#) examine the attributes of lecturers facilitating problem-based learning, emphasizing the continuing importance of student-centered approaches in preparing future health professionals. Completing the issue, [Sanitaquin et al. \(2026\)](#) explore cardiovascular endurance and blood pressure among university employees, adding to the ongoing conversation on lifestyle, health, and disease prevention.

Together, the articles in this issue remind us that improving health requires not only scientific advances, but also a deeper understanding of the social, educational, economic, and environmental realities in which people live. We are grateful for the Editorial Boards and Reviewers' commitment to advancing global health research and supporting a rigorous peer-review process.
